

Count on!

The object of the game is to be the first person to bank 40 points.

Player 1

Roll the dice twice to create a 2 digit number (E.G if I rolled a 2 and then a 3, my number would be 23)

How many more do I need to add to get to the next 'noughty number' (The next multiple of 10)? You get to bank that many points (If I rolled 23, I would need to add 7 to get to the next noughty number so I would get to bank 7 points)

Player 2

Do exactly the same after player 1 has had their turn

GOOD LUCK!
